

◆ Step-by-Step Execution of “College Placement Analysis Dashboard using Power BI” Project

STEP 1: Understand Project Objective

Your goal is to:

- Analyze **placement data**
- Show insights like:
 - Placement %
 - Average salary
 - Company-wise hiring
 - Branch performance

◆ STEP 2: Prepare Dataset

Create or collect dataset (Excel/CSV)

Include columns like:

- Student Name
- Branch (CS, IT, AI, etc.)
- Gender
- CGPA
- Skills
- Company Name
- Package (Salary)
- Placement Status (Placed / Not Placed)

Example:

Name Branch CGPA Company Package Status

Save file as:

placement_data.xlsx

◆ STEP 3: Install & Open Power BI

1. Download **Power BI Desktop**
2. Open Power BI

3. Click:
Home → Get Data → Excel

◆ **STEP 4: Load Data**

1. Select your Excel file
2. Click **Load**

◆ **STEP 5: Data Cleaning (Power Query)**

Click:
Transform Data

Do:

- Remove null values
- Change data types (number/text)
- Rename columns properly
- Remove duplicates

Example:

- CGPA → Decimal
- Package → Number

Click:
Close & Apply

◆ **STEP 6: Create DAX Measures (IMPORTANT FOR EXAM)**

Go to:
Modeling → New Measure

1. Placement Percentage

Placement % =
DIVIDE(
 COUNTROWS(FILTER(Data, Data[Status] = "Placed")),
 COUNTROWS(Data)
) * 100

2. Average Salary

Avg Salary = AVERAGE(Data[Package])

3. Total Students

Total Students = COUNTROWS(Data)

4. Placed Students

Placed Students =
CALCULATE(COUNTROWS(Data), Data[Status] = "Placed")

◆ STEP 7: Create Dashboard Visuals

Now create charts:

KPI Cards

- Total Students
- Placement %
- Average Salary

Bar Chart

- Axis → Branch
- Values → Count of Students

Shows branch performance

Pie Chart

- Legend → Placement Status
- Values → Count

Shows placed vs not placed

Line Chart

- Axis → Company
- Values → Salary

Scatter Plot

- X → CGPA
 - Y → Salary
- Shows relation between CGPA & package

◆ STEP 8: Add Filters (Slicers)

Insert slicers for:

- Branch
- Company
- Gender

This makes dashboard interactive

◆ STEP 9: Create Multiple Pages

Make pages like:

Page 1: Overview

- KPI cards
- Pie chart

Page 2: Branch Analysis

- Bar chart

Page 3: Company Analysis

- Company-wise hiring

Page 4: Skill Analysis

- Skills vs placement

◆ STEP 10: Design Dashboard (Important)

Follow:

- Clean layout
- Proper colors
- Titles for each chart

Example:

- “Placement Overview”
- “Branch Performance”

◆ STEP 11: Add Interactivity

Enable:

- Drill-down
- Tooltips
- Cross-filtering

◆ STEP 12: Save & Export

1. Save file:

Placement_Dashboard.pbix

2. Export:
File → Export → PDF

◆ Final Flow

1. Collect data
 2. Load into Power BI
 3. Clean data
 4. Create DAX formulas
 5. Build visuals
 6. Add filters
 7. Design dashboard
 8. Export
-
